

Objective: To summarize the core benefits of Goldseal and some of its commercial history in Australia.

Since 1970 Goldseal Industrial Rustproof has developed a solid reputation for Cost Effective Corrosion Control in the worst Marine, structural or Acid/Chemical environments.

For 40 years it has been chosen for application in unwashed situations that are difficult to coat with industry standard products that require.

■ Very Clean surfaces.

■ Sand blasting.

Goldseal excels in the following areas:

■ Tight application time frames (such as canning and meat processing).

■ Confined spaces or condensation voids.

■ Tidal zones with intercoat contamination issues.

■ Attic and roof truss situations with nut/bolt and flange design, flexing or vibration.

Many coatings have come and gone in 40 years and Goldseal has continued to evolve. The current Goldseal formulation is a very convenient product from a Health and Safety and environmental perspective. See Bulletin 2 Sustainability.

Goldseal is:

■ Non Dangerous Goods for transport , storage and application.

■ It is solid (97%) when cold with no solvents or catalysts required.

■ Low VOC 2.9% W/W.

■ Goldseal is applied hot , setting on contact to a film of 300-8000 microns in one application.

■ An encapsulation solution for previous coatings such as Galvanizing , epoxy or red lead.

■ It is flexible, vibration proof and will not crack or peel.

■ Spill recycle able and floats on water without dispersion.

Independent
Inspection
verifies
performance
in the field.

Australian contracts began in the 1990's and a number of clients schedule annual application of Goldseal to progressively coat all the high corrosion areas of their plant. Many of these clients are willing to act as verbal referees for Goldseal Performance after 10 years. A list of contacts is available.

Examples of Australian Contracts by industry sector

Galvanizing

- Industrial Galvanizers , starting in New castle in 1997.Contracts in All plants .
- Korvest Ltd Adelaide 2003
- Meneghellos Perth 1994. Original coating still in service 2010.
- Western Galvanizers Perth 1994
- Hunter Galvanizing
- Adelaide Galvanizing

Fertilizer Plants

- Hi-Fert in Newcastle and Port Lincoln 2004 and 2005
- Southern Cross Townsville (ex BHP Billeton) 2005 see attached photo.
- See bulletin 4 Epoxy Cancer in WA Fert store.

Meat Works

- Northern Co-op Casino Tannery 1995
- Fletcher Intl Exports in Dobbo 1995/96
- Tatiara Meat Co SA
- T&R Pastoral SA

Tannery

- Murgon Leather Queensland 2001

Papermills

- Australian Paper in Marwell 2000
- Silcon Maintenance Services

Cool Stores

- AB Oxford Cold Storage NSW
- Fletcher International NSW
- P&O Cold Logistics Perth. Truck loading canopy
- SA Coldstorage Group SA

Spalling Concrete

- Australian Paper Shoalhaven

Recreational Wharf

- Coogee Wharf Perth. See Bulletin 1

BP Service Stations

- Bird deterrent in NSW and WA 2010

Other New Zealand categories

- Auckland Harbour Bridge and Sky tower
- Barge interiors and bridge bearings.
- Air Pacific Hangar Fiji - Bird deterrent
- Road bridges for over 40 district councils see Bulletin 3 Life Cycle Costing.
- Spalling concrete Raglan wharf 23 years without maintenance
- Chelsea sugar wharf and unloading conveyor in Auckland city. Recoated 2009 after 20 years without maintenance. See attached photo. Independantly inspected by Quest Reliability.

Product and Contracting excellence.

The Goldseal Group of contracting Licensees are working in Australia , New Zealand , South Africa and the Pacific Islands.

The manufacturer and applicator work as a team to ensure timely , quality completion of shut down maintenance and ensure product performance without the traditional manufacturer applicator gap.

Adding Value to Maintenance Budgets

In the complicated contracting world Goldseal is a refreshingly reliable and straightforward solution.
